

Machine Tools
made in Japan

Proposal for Sale of Various Machine Tools and Purchase of Machine in Use

▼ Our Strength in Sales

■ We offer machines that meet customer requirements. All machines have been checked for operation and inspected.

Sales

- We offer high-precision machine tools made in Japan
 - The precision of machine tools made in Japan is world class. We have approx. 4000 items in stock and offer machines that satisfy customer needs at prices that are one-third the price of brand-new ones.
 - We have the experience of delivering machines to Japanese listed companies.
- We offer various types of services
 - We can install machines at local factories. Almost all machines in stock have been checked for operation and inspected. If there are any defects, they are repaired prior to delivery or the details of defects are notified to the customer.

▼ Our Strength in Purchasing

■ We make it possible to maximize purchase price. Purchase assessments are free of charge.

Purchasing

- We enable the purchasing of items at higher prices
 - Utilizing our network, we look for customers who want items from all over the world and introduce buyers to sellers. This enables the purchasing of items at higher prices because it eliminates the need for maintaining on-site stocks and saves on transportation costs. Also, it enables the immediate purchase of items. We can purchase items in a way that benefits sellers. We perform purchase assessments free of charge.
- We offer rough purchase estimates within the same day if photographs are provided.
 - If a photograph of the item is sent to us via email, we will provide a rough purchase estimate within the same day. For large machines and in other cases, the actual item will need to be checked on-site at a later date. Contact us any time you have **trouble disposing of items** or have **lack space**, etc.

▼ Benefits

Buyers & End-Users

- By eliminating transport costs, we can offer higher purchase prices that exceed competitor prices by up to approx. 300,000 yen.

We look for buyers who want the machine while the machine remains located at the original site. It eliminates transport costs and enables a purchase at a higher price. Also, machine buyers can purchase the item at a lower price. By reducing costs, not only are transportation efforts reduced, troubles/malfunctions due to transportation will also be reduced.

Distributors

- All products are offered at 15% less than the sales prices of distributors.

All maintenance/service of machines is performed in Japan. Since machines are exported after buyers are found, sales distributors do not have inventory risks.

▼ Products

Automobile parts manufacturer

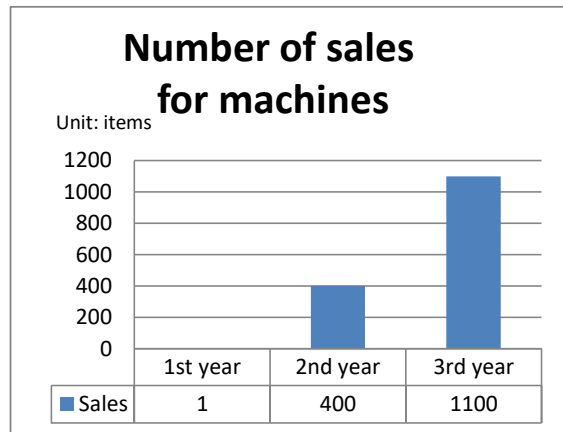

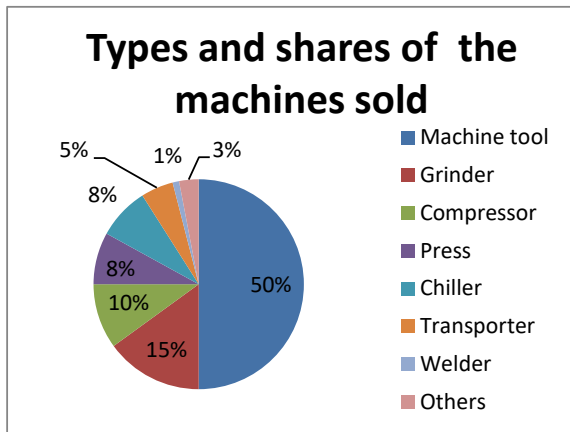

Electronics manufacturer

Plastic parts

Rubber parts manufacturer

▼ Spec sheet

- Manufacturer: YAMASAKI GIKEN, CO., LTD.
- Model: YZ-8NC
- Model year: 1990
- FANUC Series O-M
- Instruction manual included

- Achieve high precision and high rigidity
- NC control is made by FANUC, therefore support is also available overseas

Robotic parts

Bearing
